Due to coronavirus: we will print next issue Datalignum 274 on January 2021.

Acimall\_Italy: Luigi De Vito is the new president & Marianna Daschini, vice president.

Gramrode Møbelfabrik\_Denmark; since 1924.

Enjoying\_Taiwan: casters wheels for office chairs & home furniture.

Mit\_Chile, equipment for sawmills since 1982.

Murphy\_Usa: premier provider of quality softwood plywood, & veneer.

Taihei\_Japan, woodworking machinery since 1928.

Vacuum CNC\_Spain: pods divided in base & cup.

# TO THE READERS

## **Subject: Cancellation of No. 273 Sept-Dec of Datalignum**

The drama of the Coronavirus that we are all experiencing and that keeps us in isolation was also the cause of the cancellation of the Salone del Mobile in Milan and the Xylexpo Fairs in Italy.

Furthermore, since all the companies were forced to close the offices, some of our customers canceled the advertising order on Datalignum No. 273 and those who were favorable did not have the opportunity to send us the material for printing, because their graphics they didn't work.

Certainly the coronavirus drama will also bring significant change in the communication strategies of companies, primarily for trade fairs: in the future, regional fairs will disappear, which are only useful to those who organize them; in particular those for components, hardware and accessories for furniture.

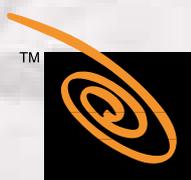

The consolidated international fairs (Interzum, IWF, Ligna, Salone del Mobile, Xylexpo and others for each hemisphere of the globe) will continue to be appreciated for their ability to attract and develop commercial exchanges.

In this situation, it would have been impossible to proceed, and therefore he decided to DELETE No. 273 of the magazine Datalignum.

**THE NEXT ISSUE, No. 274, WILL BE PRINT ON JANUARY 2021.**

*Best regards and ... please, stay safe everyone!*

# ACIMALL\_ITALY

**LUIGI DE VITO IS THE  
NEW PRESIDENT &  
MARIANNA DASCHINI,  
VICE PRESIDENT**

The general assembly of Acimall, the Association of Italian Manufacturers of Technologies for the furniture and wood industry, has ratified the appointment as President for the three-year period 2020-2023 of Luigi De Vito (Scm Group, Rimini), who will be flanked by Marianna Daschini (Greda, Mariano Comense) as Vice President.

The meeting - held on Tuesday 14 July - therefore accepted the indications that emerged from the board of directors, also approving the year's financial statements certainly one of the most complex for Acimall and for the entire world economy.

# GRAMRODE MØBELFABRIK\_DENMARK

From the beginning, the production consisted mainly of armchairs and groups of sofas with exposed wooden frames. **SINCE 1924**

In 1960, the production of solid wood dining furniture began on the basis of a unique blend of craftsmanship and design. In the following years, we managed to develop a complete program of chairs and tables, which is now exported to a large part of the world.

It takes care and professional competence for the processing of solid and precious wood furniture.

Our carpenters know their profession and are proud to keep alive the best traditions of classic carpentry.

# MURPHY\_USA

## PREMIER PROVIDER OF QUALITY SOFTWOOD PLYWOOD, & VENEERPLYWOOD

Murphy Company is America's premier provider of quality softwood plywood, beautiful veneered hardwood plywood and panels, and innovative engineered wood products. As a vertically integrated manufacturer, Murphy maximizes the use of every log. By controlling the manufacturing process – from trees to finished products – Murphy meets customer requirements at a competitive price. A determination is made for each log as to the best use of its veneer. The bark and peeler core are recovered as well, so nothing is wasted. Founded in 1909, and now in its second century of Murphy family ownership, the company's longevity is often attributed to its consistent, long-term investment in its facilities and people, its commitment to customer service, and its continual development of innovative products. **Hardwood Plywood:** Murphy's Eugene facility has more than 50 years experience manufacturing hardwood plywood and panels. Murphy sets the industry standard and delivers products that exceed national standards and often customer expectations. Murphy takes pride in producing higher-grade hardwood plywood and panels, and consistently delivers customized products with precision thickness and quality. **Veneers:** Real wood veneer paneling from Murphy offers an attractive, durable wall paneling option perfect for both residential and commercial uses. Our panels are also a popular choice for demanding high-end cabinetry and fine furniture makers.

## *Message from the President:*

“With over 90 years of history as a general manufacturer of woodworking machines, Taihei Machinery Works, Ltd. uses long accumulated know-how and technologies to defy conventional notions and to create cutting edge concepts. One of our fundamental philosophies is to contribute to our society. We strive to meet the needs of our customers with our “customer satisfaction comes first” attitude and our management principle of “developing original products and contributing to our society.” We are confident that we can serve our customers in a number of ways, from improvement of our machines, to the development of new products and to providing excellent after-sales service. We are committed to environmental responsibility and sustainability. Our entire staff is dedicated to working with you to create solutions that are not only environmentally friendly and save resources, but solutions that we can all be proud of.”

# VACUUM CNC\_SPAIN

The main difference between our brand and others lies in the division of the CNC Vacuum pods in two pieces. The Base is the inferior black part in contact with the milling center. Over the base we place the cup, the superior red part which holds the board or the piece to work out. As a result of this division we can offer you quite huge advantages. In this image you can see how the cup can be placed over the base. The union of both completes the perfect CNC vacuum pod, more economical, more efficient, more comfortable and with a careful design.

## PODS DIVIDED IN BASE & CUP

### *The advantages:*

- The suction area is easy and fast to change.
- All the Vacuum CNC cups turn 360 degrees. They also stay fixed when turning on the vacuum.
- It allows us to place elevators between the base and the cup. This makes it possible to work at many different heights, keeping always the same base and cup.
- Furthermore, all of the vacuum cups have touch valve. Consequently we can hold the CNC vacuum pods on the table even if they do not need to be used without losing vacuum.
- It allows, in case of a broken cup or need of a new suction area, to replace only the cup, what leads to a significant economic saving.
- The cups enclose the superior vacuum by a sealing rubber, very affordable and easy to replace. In other words, if it gets broken (until a 7 mm depth) we can fix the vacuum cup at 100% of its capacity simply by changing the damaged gum part.
- Facilities for enterprises that have more than one mechanising center with different vacuum cups. Thanks to our two-pieces system it could be studied the point of combining the heights. Above all, that will allow us to use the same cups in both milling centers. Sometimes it may be necessary to change the height in which it works, otherwise, the combination is not possible.
- For the majority of models it exists the cup system with board lifter included. It exists for both formats, the vacuum system and the compact one.
